Jotform | Enterprise

Single sign-on integration for faster, more secure automation

Enhance security and take advantage of time-saving features with our single sign-on integration. Jotform Enterprise supports SAML 2.0 and integrates with leading SSO solutions from Microsoft, Google, Okta, Duo, OneLogin, and more.

Speed up and secure form access

Allow your users to access forms and submission data with a single set of login credentials for faster viewing, submitting, and editing.

Tailor access

Enable collaboration without sacrificing security. Customize user permission settings with role-based access and team workspaces for shared resources.

Bring noise down to zero

Ensure responses come from the intended audience by requiring login credentials from internal form submitters.

Enable flexible form filling

Give users the option to save and continue form submissions later. Ideal for individuals managing longer forms and busy schedules.

Improve data quality

Sync credentials or import data from Okta IdP SSO servers and Google SAML-based SSO to prefill submissions and reduce manual errors.

Edit submissions easily

Add login links to form Thank You pages and email notifications so your users can view and edit their form submission data with a click.
