

BODY BRAVE ONE PAGER

Consolidate your healthcare tech stack

Challenge: Manage sensitive data and meet strict compliance requirements

Before adopting Jotform Enterprise, [Body Brave](#), an eating disorder treatment clinic, used several different software providers. The piecemeal use of software platforms resulted in time-consuming processes and siloed data, making it difficult to view information in a meaningful way. To carry out its mission, the team at Body Brave needed a platform that let them:

- Securely collect data

Schedule appointments
- Leverage conditional logic to direct clients to services

Meet data residency, HIPAA, and consumer privacy requirements

Solution: Turn 5 platforms into 1 with Jotform Enterprise

Before Jotform Enterprise, Body Brave was using five platforms to meet the needs of their organization:

- **QuestionPro** used to administer simple surveys and visualize data
- **Sync Cloud Storage** used to administer simple surveys and visualize data
- **Typeform** used to create complex surveys, i.e., surveys with conditional logic
- **Looker Studio, formerly Google Data Studio**, used to create complex data dashboards
- **Docusign** used to collect signatures from internal staff

 **Jotform** | Enterprise

“The HIPAA compliance solutions available through Jotform Enterprise enable us to meet all the security requirements, do more academic research, and publish our work.”

— Jeannine Smith, Program Evaluation Officer and Dietitian, Body Brave

Benefits

In the first six months of use, **Jotform Enterprise saved Body Brave 120 hours** just on data collection and reporting. Body Brave also used many of Jotform Enterprise’s advanced functionalities and features, including:

- Local servers
- HIPAA- and PIPEDA-enabled forms
- Multiple users and roles
- Automation and conditional logic
- 24/7 support
